A COINCRAFT EXCLUSIVE

Goldine is a solid brass alloy, formulated to look like 18KT gold. Besides its durability and weight, Goldine reproduces the finest detail and creates a coin with tremendous popular appeal.

During production, Goldine coins are die-struck on both sides. Each coin is then individually coated with fine jewelers lacquer to retard tarnishing.

Despite its beauty and appeal, Goldine is economical enough to be used for traffic builders or continuity programs. It is also a popular choice for grand opening gifts, club member souvenirs and employee recognition awards.

PRICING NOTES: It takes 2 dies to make a coin – one die per side. The prices shown are the same whether you strike one side or two sides. Pricing also includes lacquering to retard tarnishing. Bulk packing for 1", 1-1/8" & 1-1/4". 34mm and 39mm are individually polybagged. Custom-made dies are additional –see page 12 for pricing. Save money by using stock dies for one side.

LEAD TIME: 2 weeks from receipt of camera-ready artwork.

NICKEL-SILVER & ANTIQUE SILVER

BRIGHT SILVER FINISH SIMULATES FINE SILVER

Nickel-Silver is a heavyweight alloy made of a special blend of nickel, copper and zinc. Although it contains no precious metal, it is bright silver in color, scratch-resistant, non-tarnishing and very durable.

It is a great coin to use to commemorate 25th Anniversaries. In addition, it is economical enough to be used in any application to give the impression of a silver dollar.

PRICING NOTES: It takes 2 dies to make a coin – one die per side. The prices shown are the same whether you strike one side or two sides. Pricing includes individual polybagging.

Custom-made dies are additional –see page 12 for pricing. Save money by using stock dies for one side.

LEAD TIME: 2 weeks from receipt of camera-ready artwork.
