LIGHTWEIGHT FOR MAILINGS INEXPENSIVE FOR GIVEAWAYS

Aluminum coins are the perfect way to add big excitement to your next promotion. Solid metal coins convey greater value than plastic and wooden coins or tokens.

In addition, aluminum's light weight is ideal for mass mailings or parade throws.

Osborne was the first to strike aluminum coins in 1892 and is still the largest producer of aluminum coins and Mardi Gras doubloons.

PRICING NOTES: It takes 2 dies to make a coin – one die per side. The prices shown are the same whether you strike one side or two sides. Aluminum coins are bulk packed. Custom-made dies are additional –see page 12 for pricing. Save money by using stock dies for one side.

LEAD TIME: 2 weeks from receipt of camera-ready artwork.

1 1/8"

MARDI GRAS, SWEEPSTAKES GAMES, PARADES

Anodizing is a bright, permanent color coating that can be applied to any aluminum coin.

In addition to adding color, anodizing can be used to distinguish different denominations or expiration dates. Furthermore, it can be used to tie in product packaging or team colors.

STANDARD COLORS

CoinCraft uses four standard colors, RED, BLUE, GREEN, and GOLD. Additional colors are available although we cannot provide exact matches.
